Cutting and pasting I place great importance on the ability to copy and paste (or cut and paste) parts of an image into new images in Photoshop. A small mistake in cutting or pasting a part of a photo and replacing it with another image can be costly. Using the Photoshop Trackpad or the mouse provides a simple method of copying and pasting objects or portions of images from one layer to another. Clicking the Layer menu and choosing Edit→Copy gives you a new layer in your image with a dotted outline around the area that you're copying. The dotted outline doesn't affect the image, nor does it affect the blending modes of the underlying layers. You can delete the outline by choosing Edit→Clear Layer Outline, and then the entire copied object is removed from its source. Select the layer in your image that you want to copy. Then choose Edit→Copy. Go to your new layer and click to select that layer. Then press the Shift key and click to select the entire image. Figure 11-5 shows you how to use the Shift key to add a layer to a selection. **Figure 11-5:** Shift selects the entire image. When copying from a layer to an adjacent layer, the copied part appears in its new layer with a transparent background and a halo around the item. The halo appears as a white border around the object and is removed by clicking the Layer menu and selecting Soften. You can use the Selection tool to copy just a portion of an image. Press and hold the Ctrl (Windows) or ⌘ (Mac) key while you select the area

Photoshop is a powerful graphics editor. Its basic features include photo editing tools like image resizing, cropping, rotating, and collages. It also lets you combine multiple photos into panoramas, create a website-style color scheme, and change the way your photos look. Photo editing can take a long time to learn, though. With Photoshop Elements, a beginner can open a photo, start cropping, resizing and adjusting it. When you're done, the image is saved in a format called "PSD." Photoshop Elements lets you open a PSD file and modify it just like you did a photo. It can be used to create a whole professional website. Photoshop is all about more options and tools. This is the professional version of Photoshop. It lets you edit vector images, make pictures look completely different from each other, and create high-quality drawings. You can combine them into a collage, print them, and include them in a website. Photoshop also lets you create a variety of file types: JPEG, GIF, TIFF and SWF. Graphic designers, web designers and editors use Photoshop for editing photos or adding a web-style color palette to images. These types of files are called "bitmap" files. Photoshop has tools for resizing, rotating and cropping them so they're easier to use. It's also possible to create vector-based files. Vector graphics are basic elements of the web. You can add text, create logos, and even animate a picture. Photoshop can build a web file or just add the text, since it can convert these files to an HTML page. Photoshop was released in 1987, and it's been bundled with the software ever since. You can use it on the Mac or PC, but it runs only on Macs. There are a variety of different versions of Photoshop depending on what you need it to do. Some have more or fewer features. Photoshop Elements is a simplified version of Photoshop. It includes the essentials — editing photos and creating slideshows — but it's limited in features. In this guide, we'll tell you how to: Open Photoshop Elements Open a Photoshop file in Photoshop Elements Photoshop Elements is a graphics editor. It lets you crop, resize, rotate and color images. Q: Proof that $\sin^2\left(\frac{x\pi}2\right)+\cos^2\left(\frac{x\pi}2\right)=1$ How do you prove that $\sin^2(\frac{x\pi}2)+\cos^2(\frac{x\pi}2)=1$? A: $$\sin(x\pi)=\sin(\pi)\cos(x\pi)$$ $$=\frac12(\sin(\pi)+\cos(\pi))\cos(x\pi)-\frac12\sin(\pi)(-1+\cos(x\pi))$$ $$=\frac12[1+\cos(x\pi)]\cos(x\pi)-\frac12\sin(x\pi)\cos(x\pi)$$ $$=\frac12\cos(x\pi)-\frac14\sin(x\pi)$$ Now substitute $\frac{x\pi}2$ in place of x. A: This is known as the double-angle identity. A: Let $f(x) = \sin^2(\frac{x\pi}2) + \cos^2(\frac{x\pi}2)$ Then $f(x) = \sin^2(\frac{x\pi}2) + \cos^2(\frac{x\pi}2)$ $=\sin^2(\frac{x\pi}2) + [\cos(\frac{x\pi}2) - \sin(\frac{x\pi}2)]^2$ $=\sin^2(\frac{x\pi}2) + [\cos(\frac{x\pi}2) + \sin(\frac{x\pi}2)]^2$ $=\sin^2(\frac{x\pi}2) + [\sin(\frac{x\pi}2) + \cos(\frac{x\pi}2)]^2$ $=\sin^2(\frac{x\pi}2) + [\cos(\frac{x\pi}2) - \sin(\frac{x\pi}2)]^2+[\cos(\frac{x\pi}2) + \sin(\frac{x

In the News 2016 In a study conducted by a team of U.S. and Canadian scientists, it was found that bright green plants could help treat cancer. The study, which looked at cancer cells that had been tainted with the green dye, algenol, shows that they convert the dye to a green isomer. The same procedure could also be used to effectively treat people with cancer. You may have heard of me by another name: Starbound. I've been working on Starbound since its inception, and here I write about the nuts and bolts of it. Let's Talk Money As we've all heard, the past couple of years have been rather busy for Minecraft. We've had minor updates here and there, and a bunch of cool new content. Unfortunately, those updates and new content have all taken a lot of development time, and we haven't had a chance to pay attention to the app store or the marketplace. I'm not entirely sure why we haven't focused more on our income. I do know that I've been joking around with the developers on the same project that I'm working on on Twitter, and with the MIT TechTV crew. Forgive me, it may not seem like it because the project name really is Starbound. I'm currently in the process of developing a new game mode called "survival." I've been working on the gameplay model and the core mechanics. Recently, I finished up the combat system, which I'm very happy with. Now, instead of requiring combat against AI-controlled enemies, I've decided to just have combat with no AI. If you're familiar with it, you can probably guess the reason why… If you're a fan of the game, here�
